

**Data Sheet** 

# Stainless Steel 303 / 1.4305 / X10CrNiS18-9

## **Alternative Designations**

### **Key Features**

(SAE) | S30300 (UNS) | Z8CNF18-09 (AFNOR) | 303S31 (BS) | 2346 (SIS) | SUS303 (JIS)

X10CrNiS18-9; X8CrNiS18-9 (ISO) | 303 (AISI) | 303 High strength • Good machinability • Ductility • Low corrosion resistance

#### **Description**

It is an austenitic chromium-nickel stainless steel with sulfur added to its composition. The result is a material with improved machinability, but with reduced corrosion resistance. This material is therefore ideal for use in environments where corrosion is not a major concern, such as in the food processing industry. In terms of its mechanical properties, X10CrNiS18-9 is a fairly tough material. It is also quite ductile, with an elongation at break of around 31%.

### **Mechanical Properties**

## **Chemical Composition**

| Yield strength       | 351 MPa |
|----------------------|---------|
| Tensile strength     | 398 MPa |
| Elongation at break  | 31%     |
| Hardness             | 234     |
| Module of elasticity | 562 GPa |

| Module of elasticity | 562 GF |
|----------------------|--------|
|                      |        |
| Physical Properties  |        |

| Density                        | 323 kg/dm³                                |
|--------------------------------|---|
| Electrical conductivity        | $3.22 \text{ m/}\Omega \cdot \text{mm}^2$ |
| Coefficient of thermal expansi | on 42 K-1 · 10-6                          |
| Thermal conductivity           | 13.3 – 31.2 W/m · K                       |
| Specific heat capacity         | 434 J/kg · K                              |
|                                |   |

| Al | -        | N  | 0.11%   |
|----|----------|----|---------|
| Ві | -        | Nb | -       |
| С  | 0.12%    | Ni | 8 – 10% |
| Cd | -        | Ο  | -       |
